

Jonathan Ilias

Senior Full Stack & Cloud Engineer

Senior Cloud Full Stack Engineer with 7+ years of experience building scalable SaaS applications and cloud-native platforms. Passionate about solving complex engineering challenges through modern web technologies, cloud infrastructure, automation, and AI. Experienced with React, Angular, Node.js, Go, Python, AWS, Azure, Kubernetes, and Terraform.

TECHNICAL SKILLS

Programming Languages

JavaScript, TypeScript, Python, Go

Frontend

React, Angular, Ionic, PWA

Backend

Node.js, Express, FastAPI, REST APIs

Cloud & DevOps

AWS (Lambda, EC2, API Gateway, S3, CloudWatch, SNS, SQS, IAM, CodePipeline, CodeBuild)

Azure (Functions, Azure SQL, Event Hubs, Blob Storage, Resource Groups)
Terraform, Docker, Kubernetes,

GitHub Actions, Azure DevOps

Databases

Azure SQL, SQL Server, MongoDB, Neo4j

Languages

Spanish (Native), English (Professional Working Proficiency - B2)

CONTACT

WORK EXPERIENCE

Full Stack Developer

STEFANINI- NOV 2025 - PRESENT

- Designed and developed 5+ microservices and RESTful APIs supporting internal enterprise platforms handling thousands of requests per day.
- Provisioned and managed multi-cloud infrastructure across AWS and Azure using 11+ Terraform modules, supporting multiple enterprise projects.
- Participated in technical design and cloud architecture decisions for a team of 6 developers.
- Automated infrastructure provisioning and application deployment using Kubernetes, Docker, Docker Compose, GitHub Actions, and Azure DevOps.
- Leveraged AI-powered development tools and autonomous coding agents (including OpenClaw) to rapidly build Proofs of Concept (POCs), accelerating experimentation and reducing development effort.
- Produced and maintained technical documentation using Swagger, Jira, and Confluence.

Full Stack Developer

UDT / HAVRION - OCT 2022 - NOV 2025

- Developed 5 enterprise web applications using React and Angular.
- Designed and implemented 100+ RESTful API endpoints using NestJS and modern software architecture principles.
- Developed three Samsung Smart TV applications, including a legacy JavaScript application, an SSSP application built with React, and a Samsung VXT application using Tizen technologies.
- Led the migration from Angular 9 to Angular 16, modernizing the frontend architecture and improving maintainability.
- Contributed to the migration from Azure DevOps to GitHub workflows and CI/CD processes.
- Improved live video streaming performance by implementing WebSocket-based communication between the Samsung SSSP application and the frontend.

Back End Developer

OMNIX IA - ABR 2021 - OCT 2022

- Developed and maintained 20+ AWS Lambda functions powering production retail solutions.
- Designed and implemented 100+ RESTful API endpoints using Amazon API Gateway and Node.js.
- Delivered cloud solutions supporting enterprise customers including Casaideas, Privilege, Komax (Chile), and EFE (Peru).
- Optimized Lambda deployment packages using esbuild, reducing package size and improving deployment efficiency.
- Designed and maintained cloud-native applications using MongoDB, Neo4j, CloudWatch, and Amazon S3.
- Collaborated within a 7-developer agile team to deliver scalable AWS solutions.

Back End Developer

XPECTRUM - JAN 2019 - ABR 2021

- Led the development of two major application modules, from planning through production deployment.
- Built Node-RED integrations to automate order monitoring, status updates, and email notification workflows.
- Developed FastAPI services exposing machine learning models based on genetic algorithms to optimize store-item allocation strategies.
- Designed and maintained RESTful APIs and cloud-native services using Node.js, Express, MongoDB, and Neo4j.
- Developed responsive web applications using Angular and React.
